

Recompete Timing | A vehicle's last date to order sets the recompete clock, not its last task order's end date.

Recompete is when authority to place new orders ends, not when the latest task order ends.

For an Indefinite Delivery Vehicle (IDV), the parent's last date to order controls; orders placed during the ordering period can keep performing after it. Reading the latest child-order end as the recompete date is the common false signal.

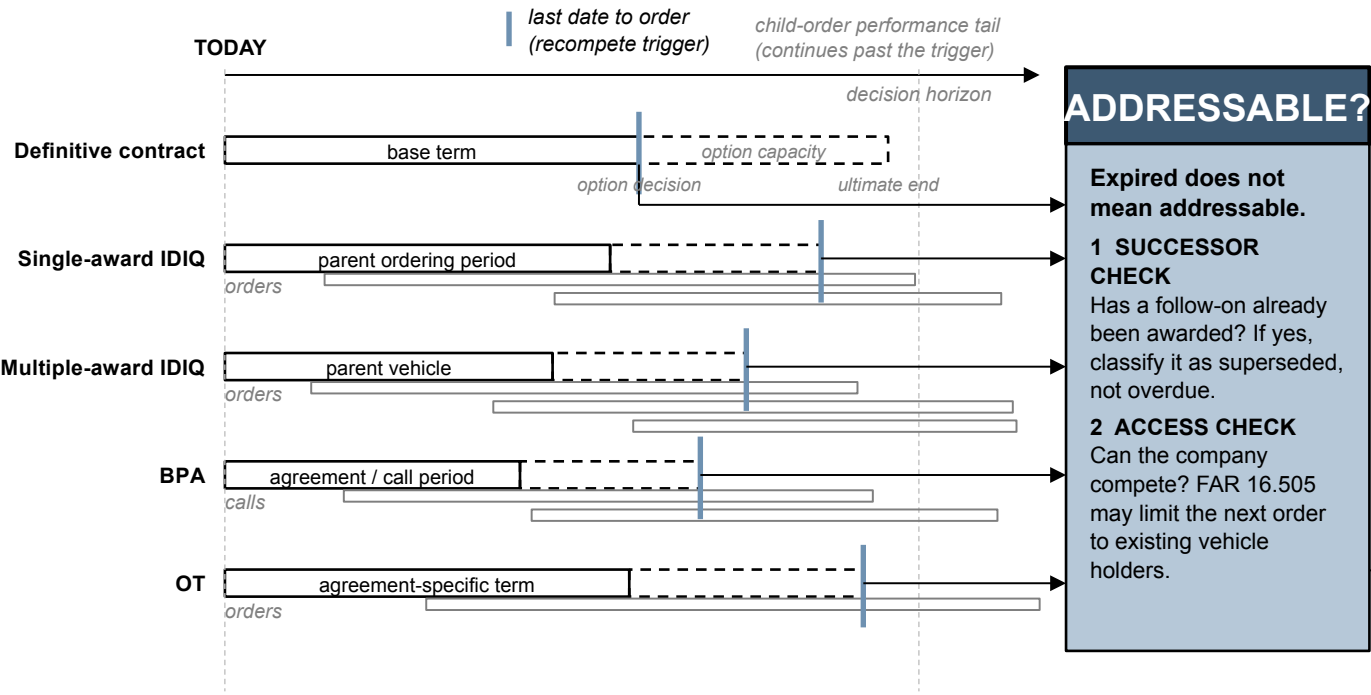

Timing is one of four reads. Requirement recurrence, authority lapse, competition route, and eligible bidder set are separate questions; the clock answers only the second.
Timing confidence varies by vehicle type | A Basic Ordering Agreement (BOA) nominal end is not a guaranteed recompete | A later Procurement Instrument Identifier (PIID) may already be the successor | Option value is capacity, not guaranteed revenue

Recompete Timing | A vehicle's last date to order sets the recompete clock, not its last task order's end date.

Recompete is when authority to place new orders ends, not when the latest task order ends.

For an Indefinite Delivery Vehicle (IDV), the parent's last date to order controls; orders placed during the ordering period can keep performing after it. Reading the latest child-order end as the recompete date is the common false signal.

Vehicle type	Recompete clock	Confidence	Note
Standalone definitive contract	Current and ultimate completion	High	Current may be an option decision; ultimate is the outer horizon.
Indefinite-delivery / indefinite-quantity (IDIQ), single- or multiple-award	Parent last date to order; child end for holders-only work	High (parent)	Parent governs vehicle; child follow-on may be holders-only.
Task order or delivery order	Child ultimate completion	Medium	Follow-on may be holders-only.
Blanket Purchase Agreement (BPA)	Agreement or call-period logic	Medium	Inspect parent and call rules.
Basic Ordering Agreement (BOA)	Nominal agreement end	Low	Not a contract; not a guaranteed recompete.
Other Transaction (OT) agreement or order	Agreement-specific terms	Variable	Read governing agreement; validate externally.

OPPORTUNITY STATE, AFTER BOTH GATES		
Open now	Option decision	Likely upcoming
Holders-only	Superseded	Research required

Timing is one of four reads; recurrence, authority, competition route, and bidder eligibility remain separate.

Timing confidence varies by vehicle type | A Basic Ordering Agreement (BOA) nominal end is not a guaranteed recompete | A later Procurement Instrument Identifier (PIID) may already be the successor | Option value is capacity, not guaranteed revenue

Obligated vs. Unobligated | Unobligated ceiling is capacity already inside awarded vehicles, not unspent budget authority.

Three contract-value measures, never summed.

Obligated, current value, and ceiling restate the same money. Only the per-action obligation stream is additive; sum it, never the cumulative snapshots.

SEPARATE UNIVERSES
not outer rings

Outlay
cash disbursed

Budget demand
requested or enacted

Subaward
first-tier supplier flow

never summed with the nest

"Unobligated" has two senses; this slide means the contract one.

CONTRACT SENSE (THIS SLIDE)
Vehicle ceiling not yet obligated; capacity already inside an IDIQ.

BUDGET SENSE (NOT THIS SLIDE)
Appropriated authority not yet placed on contract. Different number, different universe.

MONEY-MEASURES GLOSSARY | nested contract measures

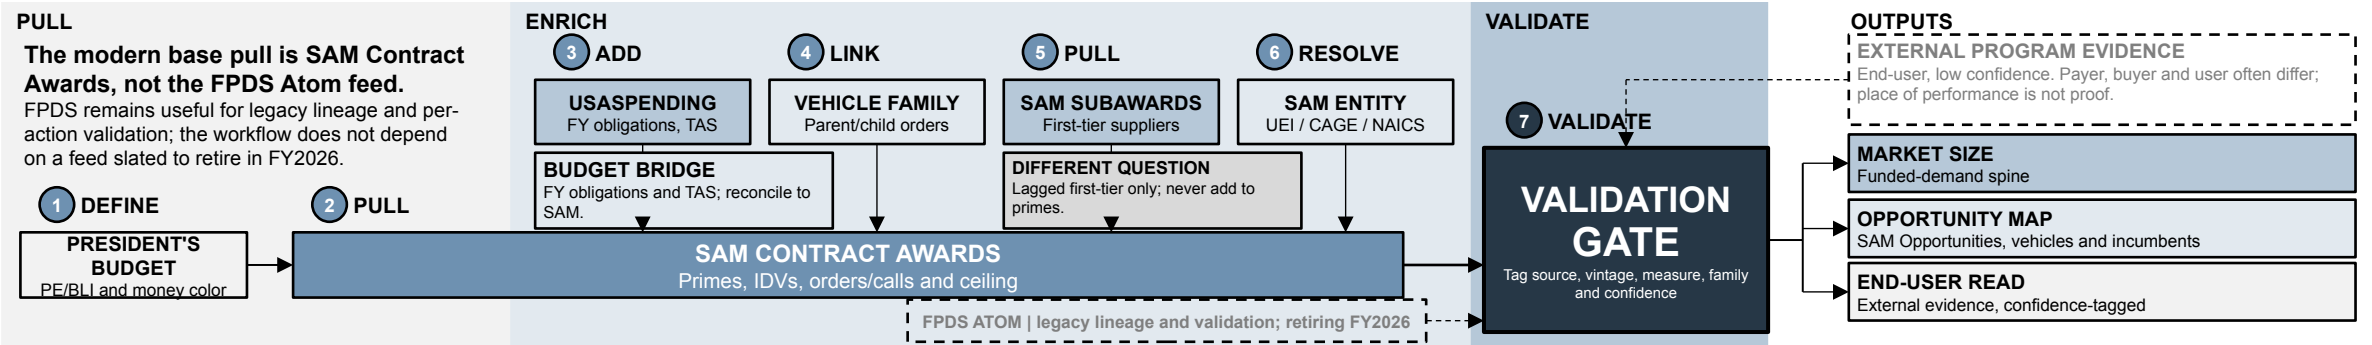

Measure	What it is	Where it appears	Common misread
Action obligation	One transaction or modification	Award action and transaction records	Summing cumulative snapshots
Cumulative obligation	Restated running total to date	Award record	Treating each restatement as new money
Current value	Base and exercised options	SAM Contract Awards value fields	Reading it as the ceiling
Potential / ceiling	Base and all options; maximum authority	SAM Contract Awards ceiling fields	Treating ceiling as funded or guaranteed revenue

Count the capacity once, and call it indicative.
Collapse parent, child orders, and modifications into one family before reading the gap. A ceiling may be shared across many holders and never used, so the gap is an opportunity indicator, not pipeline value.

Sum action obligations only	Never sum cumulative snapshots	Keep obligations, current value, ceiling, outlays, budget demand, and subawards separate	Roll the vehicle and its children into one family	Ceiling and option value are not guaranteed revenue
-----------------------------	--------------------------------	--	---	---

Award Data Sourcing | SAM Contract Awards anchors the pull; funding and subaward layers enrich it, and validation precedes any total.

Source	Role in workflow	Best answers	Caveat / rule	Slide output
President's Budget / justification (P-1, R-1)	Forward funding	Funded by account, PE/BLI, color of money?	Budget lines do not map to NAICS/PSC or vendors	Funded-demand spine
SAM Contract Awards API	Prime and vehicle pull	Awards/IDVs; parent-child structure; ceilings?	Do not double-count vehicle and child orders; tag coverage	Vehicle, incumbent and capacity map
USAspending	Budget bridge	Transaction FY obligations; funding TAS?	Reconcile to procurement record; fields differ	TAS bridge and FY view
SAM Subaward Reporting	First-tier layer	Which reported suppliers sit under a prime?	Lagged/incomplete; separate from prime obligations	Supplier and workshare map
SAM enrichment sources	Resolve and pipeline	UEI/CAGE/NAICS; what is posted pre-award?	Registration/posting does not prove program relevance or award	Vendor segments and watchlist
FPDS Atom feed	Legacy validation	What does the older action feed show?	Not the future base; retiring FY2026	Lineage validation
External program evidence	End-user attribution	Who requires, tests, or fields the capability?	Cite and confidence tag; place of performance is not proof.	End-user map
VALIDATION IS THE METHOD. Most errors come from mixed money universes or double counting. Award data names the buyer, not the user.				
		Normalize IDs by source Validate returned filters Sum action obligations, not cumulative totals Keep money universes separate	Roll the vehicle and child orders into one family Reconcile SAM and USAspending Tag source, date, measure, coverage and confidence
